

Product Notice: Plate Cutter Discontinuation

Dear Valued Customer,

This letter serves as formal notification that 4titude Ltd (from Brooks Life Sciences) is discontinuing the products listed in the table below. 4titude Ltd. acknowledges our obligation to promptly inform our customers of the intent to discontinue products to enable our customers to prepare for alternatives and/or assist in recommending any suitable alternatives. Although the Plate Cutter – and all accompanying part numbers within the portfolio – will be discontinued with immediate effect, we will of course continue to support any units that have already been purchased. All affected customers will be contacted individually to discuss how we can support their needs.

The decision to discontinue the Plate Cutter has been taken since the development and launch of the Random Access range of sealing and plate consumables offer a more advanced solution to creating individually sealed PCR consumables. The Random Access concept is the latest and most diverse PCR sample handling and storage solution we have brought to market. We are now offering multiple sealing variations from 96 individual seals on a 96-well Random Access plate to 8-strip seals on a 96-well Break-A-Way plate. These solutions mean users will no longer need to seal their plates with a standard 125mm x 78mm heat seal, to later cut them using the Plate Cutter for use within workflows that require a flexible approach.

Related Part Numbers:

Part Number	Description
